Search Notes:

Examiner Portner,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

Toby Port

STIC SEARCH RESULTS FEEDBACK FORM

Biotecht Chem Library

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor 571-272-2507 Remsen E01 D86

> I am an examiner in Workgroup: Example: 1610
Relevant prior art found, search results used as follows:
102 rejection
☐ 103 rejection
☐ Cited as being of interest.
Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
 Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
> Relevant prior art not found:
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention.

09/545,199

Please search SEQ ID NO 4, and back translate the amino acid to the corresponding nucleotide sequence. The claims recite 70% identity to a nucleotide sequence that encodes SEQ Id NO 4. Thanks

ALIGNMENTS

```
The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is a protein encoded by one such virulence gene. The virulence genes of the present invention may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and
                                                                                                                                           Virulence gene, antibacterial, vaccine, bacterial infection, septicemia, bronchopneumonia, rhinitis, wound infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Attenuated Pasteurellaceae bacteria comprising mutations in virulence genes, useful as a live attenuated vaccine against bacterial infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 39; Page 68-69; 322pp; English.

The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is a protein encoded by one such virulence gene. The virulence genes of the present invention may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and
                                                                                                              Virulence gene; antibacterial; vaccine; bacterial infection; septicemia; bronchopneumonia; rhinitis; wound infection.
                                                                                                                                                                                                                                                                                                                                                                                                              Attenuated Pasteurellaceae bacteria comprising mutations in virulence genes, useful as a live attenuated vaccine against bacterial infections.

```

The present invention describes a gram-negative bacteria comprising a mutation in a gene, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria mutant or an attenuated pasteur-claceae bacteria. The mutated genes have antibacterial activity Pasteur-claceae bacteria. The mutated genes have antibacterial activity Pasteur-claceae bacteria on be used as vaccines in the fields of human edicine or veterinary medicine, and for identifying new antibacterial ABQ33578 and ABB54473 to ABP5451 represents sequences used in the contract of the present invention. (Updated on 06-AUG-2003 to field.

mutant gram-negative bacteria, useful as vaccines and for identifying anti-bacterial agents that target virulence genes and their products.

```

The present invention describes a gram-negative bacteria comprising a mutation in a gene, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria mutant or an attenuated and can be used in vaccines. The gram-negative bacterial activity Pasteurellaceae bacteria can be used as vaccines in the fields of human medicine or veterinary medicine, and for identifying new antibacterial agents that target the virulence genes and their products. ABQ83458 to exemplification of the present invention

The isolated sequences are sources of probes and primers for detecting the genome of P. Luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the

polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that the carry a gene-containing vector are used to select compounds that induce or inhibit expression of the genes in plants, response or sensitivity to toxins and antibiotics produced by P. Imminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and recombinant production of the proteins, particularly toxins and antibioticals useful as insecticides, bactericides and fungicides. The combinant production of the proteins, particularly toxins and penes, proteins, vectors containing the genes and Ab are also useful the care ansitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. Luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins

The invention relates to new Proteus mirabilis polypeptides and polynucleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of enerating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis, polypeptide and method for screening test compounds for anti-bacterial targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a proteus mirabilis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KSINFFQSLGIKILTQDSGIGDTPSVEQLIGSVNSMIDAYKKGEVDVVYLVYNKFINTMS 180

```
The present invention describes a purified or isolated nucleic acid sequence (I) consisting essentially of one of the 93 nucleotide sequences of given in AAHBA1202 to AAHBA1294, where expression of the nucleic acid in a microorganism is capable of inhibiting proliferation of a microorganism.

(I) have antibacterial and antibiotic activities, and can be used in generaby. Expression of (I) in a microorganism inhibits proliferation of the microorganism, and the manufactured antibiotic is useful for reducing the microorganism in a subject, specifically humans. The nucleic acids that inhibit bacterial growth or proliferation can be used as antisense therapeutics for killing bacteria. In addition to therapeutic copy that inhibit bacterial and sequences complementary to sequences of uncleic acid probes complemented complementary to sequences uncleic acid probes complementary to proliferation. For example, nucleic acid probes complementary to proliferation-required sequences of that are specific for particular species of microorganisms can be used as peciness. AAHBA1295 to AAHBA1487 and AAHBA1491 represent in AAG9B219 to AAHBA14814 and AAHBA1491 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

```

The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention Sequence 297 AA;

```
The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, of the ability to blid a P. aeruginosa nucleic acid, as components of fective antibacterial targets, as templates for antibacterial drugs, including anti-P. aeruginosa at argets for antibacterial drugs, components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CABO8436 represent P. aeruginosa polypeptides of the invention. Note: The specification but was obtained and electronic format from USPTO at
                                                                                                                                                                                                                                    Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           KSINFFOSLGIKILTQDSGIGDTPSVEQLIGSVNSMIDAXKKGEVDVVYLVYNKFINTMS 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated Acinetobacter baumannii mucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for disponeing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A. baumannii protein.

New nucleic acid encoding a Moraxella catarrhalis polypeptide, useful for preparing a composition for diagnosing, preventing or treating infection caused by Moraxella catarrhalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MAGAKEIRTKIASVKSTQKITKAMEMVAASKWRKTQERMSSSRPYSETIRNVISHVSKAT 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               an Moraxella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid encoding an Moraxella catarrhalis polypeptide. The nucleic acid is useful for preparing a Composition for diagnosing, preventing or treating infection caused by Moraxella catarrhalis. The present sequence represents the amino acid sequence of a M. catarrhalis protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20 MASLKEIRAKVTSIKSTOKITRAMOMVAASKARRAQERMELGRPYSDGIRRVISHLVQAQ

The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain relates, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed of genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of olypeptide and polymuclectide sequences have applications in polypeptide and polymuclectide sequences have applications in dispositic for generatic disorders or other traits to assess biodiversity capton coid sequences. AbG00010-AbG30377 represent novel human diagnostic amino acid sequences. AbG00010-AbG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in the will be printed specification, but was obtained in the will be printed specification, but was obtained in the will be printed sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HPFLVDREVKKVGMIVVSTDRGLCGGLNVNLFKTVLNEMKEWKEKDVSVQLSLIGSKSIN 124

                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MAGAKEIRTKIASVKSTQKITKAMEMVAASKMRKTQERMSSSRPYSETIRNVISHVSKAT

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primars, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving abberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, formalics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. AEG00010-ABG30377 represent novel human diagnostic mino acid sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at the sequences of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the will be added to the constant and produces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   42 SRPYSETIRNVISHVSKATIGYKHPFLVDREVKKVGMIVVSTDRGLCGGLNVNLFKTVLN 101

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ATP synthase gamma subunit atpG [imported] - Bacillus halodurans (strain C-125)
C;Species: Bacillus halodurans
C;Species: Bacillus halodurans
C;Date: 01-Dec-2000 #sequence_revision 01-Dec-2000 #text_change 09-Jul-2004
C;Accession: C84119
R;Takami, H; Nakasone, K; Takaki, Y; Maeno, G; Sasaki, R; Masui, N; Fuji, F; Hirchandeleic Acide Res. 28, 4317-2000
A;Title: Complete genome sequence of the alkaliphilic bacterium Bacillus halodurans and A;Accession: C84119
A;Retens: preliminary
A;Molecule type: DNA
A;Residues: 1-285 <2000
A;Crose-references: UNIPROT: Q9K6H4; GB:AP001519; GB:BA000004; NID:g10176109; PIDN:BAB07: C;Generics: atpG

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBUNIT: F-type Arpases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunits a, b and c. SIMILARITY: Belongs to the Arpase gamma chain family.
                                                                                                    Gaps

The gamma chain is believed to be important in regulating ATPase activity and the flow of protons through the CF(0) complex.

CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate + H(+)(Out)
ATP synthesis, CF(1), Complete proteome, Hydrogen ion transport, Hydrolase.

Froc. In regulating Arpase activity and the flow of proton gradient across the membrane. The gamma chain is believed to be through the CF(0) complex.
CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate + H(+)(Out).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PECIES=S.flexner; STRAIN=301 / Serctype 2a; MEDLINE=2272406; PubMed=12384590; Din O.
